Open to Relocation: USA | Europe | APAC | India (All States)

Professional Summary

Data Engineer and Analytics Engineer with 3+ years of experience building scalable data systems for enterprise clients. Specialized in ETL/ELT pipelines, data warehouses, and cloud-native platforms on AWS at a B2B SaaS company serving fleet clients across 29 European markets. Improved data accuracy from 89% to 96%, reduced SQL query latency by 45%, maintained 99.2% AWS uptime, and automated 500+ ingestion workflows. Proficient in Python, SQL, dbt Core, Apache Airflow, dimensional modeling, and PostgreSQL.

Technical Skills

Data Engineering: ETL/ELT Pipelines, dbt Core, Apache Airflow, Data Warehousing, Dimensional Modeling, Star Schema, Type 2 SCD, Data Observability, Data Lineage, Batch Processing, Incremental Loading
Languages: Python (Pandas, NumPy), SQL (Window Functions, CTEs, Query Optimization, Indexing)
Cloud: AWS (S3, Lambda, Glue, Athena, CloudWatch), IAM, Docker, Git, CI/CD, Medallion Architecture, Parquet
Databases & BI: PostgreSQL, MySQL, Google Looker Studio, Power BI (DAX), Streamlit, Supabase
Generative AI & Other: LLM API Integration, Prompt Engineering, GitHub Copilot, Web Scraping, REST APIs, Agile/Scrum

Professional Experience

MapUp Inc. (TollGuru) – B2B SaaS Startup **Oct 2021 – Jul 2025**
Analytics Engineer / Data Analyst Lead – Europe Region *California, USA (Remote)*

- Raised data accuracy from 89% to 96% by architecting an automated validation framework with schema checks, anomaly detection, and null value monitoring, eliminating 60% of manual review across 500+ sources.
- Optimized complex SQL queries using advanced indexing, join restructuring, and query plan analysis, reducing execution time by 45%; collaborated with product and engineering teams to improve dashboard performance for clients including Lyft and FirstFleet.
- Built and deployed 15+ scalable ETL/ELT pipelines using Python, REST APIs, and web scraping (BeautifulSoup, Selenium), automating data ingestion across 500+ sources with near real-time availability.
- Delivered a distance-based tolling calculation model improving pricing accuracy by 40% and batch processing performance by 10%, supporting acquisition of 3 new enterprise clients.
- Managed AWS cloud infrastructure (Lambda, S3, CloudWatch) achieving 99.2% uptime; led and mentored a 5-person cross-functional team, coordinating with stakeholders across engineering, product, and operations.
- Enhanced S3 data lake performance by restructuring data into partitioned Parquet formats, reducing Athena scan costs by 35% and enabling faster analytical queries.

Projects

Enterprise Revenue Intelligence Platform **PostgreSQL, dbt Core, LLM API, Looker Studio | 2026**

- Designed production-grade data warehouse on 541,909 transactions using star schema and dimensional modeling (3 fact + 5 dimension tables, Type 2 SCD) with full data lineage and dbt test coverage.
- Integrated LLM API as natural-language query interface on Supabase PostgreSQL; delivered revenue leakage detection and 3-method forecasting across 4 live Looker Studio dashboards.

Serverless Weather Data Platform **Python, AWS Lambda, S3, Glue, Athena, CloudWatch | 2026**

- Deployed Bronze-Silver-Gold medallion architecture on AWS serverless; built real-time pipeline monitoring for schema drift and anomalies. Achieved 99%+ reliability at under $2/month.

Education

B.Tech in Computer Science Engineering **2016 – 2020**
KIIT College of Engineering *Gurgaon, Haryana*

Certifications

Google Data Analytics Professional Certificate | Coursera, 2024
Prompt Engineering for Developers | DeepLearning.AI, 2024
