Open to Relocation: USA | Europe | APAC | India (All States)

Professional Summary

Senior Data Analyst with 3+ years turning raw data into actionable business intelligence at scale. At TollGuru (B2B SaaS), owned analytics for enterprise fleet clients including Lyft and FirstFleet across 29 European markets. Built dashboards, automated reporting, and delivered insights that drove 3 new client acquisitions. Core strengths: advanced SQL (window functions, CTEs, query optimization), Python (Pandas, NumPy), Google Looker Studio, Power BI, and Excel. Improved data accuracy from 89% to 96% and reduced dashboard query times by 45%.

Technical Skills

Core: SQL (Window Functions, CTEs, Subqueries, EXPLAIN ANALYZE, Indexing, Stored Procedures), Python (Pandas, NumPy, Matplotlib), Excel (Pivot Tables, VLOOKUP, Advanced Analytics)
BI & Visualization: Google Looker Studio, Power BI (DAX, Data Modeling), Streamlit, Data Storytelling
Data Engineering: ETL/ELT Pipelines, Data Quality Validation, Star Schema, Dimensional Modeling, dbt Core
Cloud & Tools: AWS (S3, Athena, Lambda, CloudWatch), PostgreSQL, MySQL, Git, REST APIs, Docker
Other: Web Scraping (BeautifulSoup, Selenium), Statistical Analysis, A/B Testing Fundamentals, Agile/Scrum

Professional Experience

MapUp Inc. (TollGuru) – B2B SaaS Startup **Oct 2021 – Jul 2025**
Senior Data Analyst – Europe Region *California, USA (Remote)*

- Owned end-to-end analytics for toll and routing datasets across 29 European countries, delivering weekly insights and trend reports to business stakeholders via Google Looker Studio dashboards and Excel reports.
- Rewrote and optimized 50+ complex SQL queries involving multi-table JOINs, window functions (ROW_NUMBER, RANK, LAG/LEAD), and CTEs; applied EXPLAIN ANALYZE and indexing strategies to cut dashboard query times by 45%.
- Designed automated data quality framework (schema validation, anomaly detection, null checks) that improved dataset accuracy from 89% to 96% and reduced manual QC effort by 60% across 500+ data sources.
- Built 15+ Python-based data pipelines automating ingestion from government portals, PDFs, and REST APIs, eliminating hours of manual data collection per market per week.
- Delivered a distance-based tolling pricing model that improved accuracy by 40%, directly contributing to acquisition of 3 new enterprise clients (Lyft, FirstFleet).
- Led and mentored a 5-person analyst team; coordinated with product, engineering, and operations stakeholders to align data deliverables with business priorities.

Projects

Enterprise Revenue Intelligence Platform **PostgreSQL, dbt Core, Python, Looker Studio | 2026**

- Business lacked unified revenue visibility across 541K transactions – designed a star schema data model (3 fact + 5 dimension tables) and built 4 live Looker Studio dashboards covering revenue leakage, AR aging, and churn forecasting.
- Implemented 3-method forecasting (rolling average, regression, churn-adjusted), enabling finance team to identify $442K+ in revenue leakage through automated anomaly detection.

Serverless Weather Data Platform **Python, AWS Lambda, S3, Athena, CloudWatch | 2026**

- Needed cost-effective continuous data ingestion – deployed Bronze-Silver-Gold architecture on AWS serverless with real-time quality monitoring. Result: 99%+ reliability at under $2/month.

Education

B.Tech in Computer Science Engineering **2016 – 2020**
KIIT College of Engineering *Gurgaon, Haryana*

Certifications

Google Data Analytics Professional Certificate | Coursera, 2024
Prompt Engineering for Developers | DeepLearning.AI, 2024
