Professional Summary

Data Engineer with 3+ years building production data infrastructure at scale – 15+ ETL/ELT pipelines, 500+ automated sources, 99.2% AWS uptime. At TollGuru (B2B SaaS), engineered the data backbone serving enterprise fleet clients including Lyft and FirstFleet across 29 European markets. Core stack: Python, SQL, dbt Core, AWS (Lambda, Glue, S3, Athena), PostgreSQL, and dimensional modeling. Key wins: 89% to 96% data accuracy, 45% SQL latency reduction, 3 new enterprise clients from a pricing model I architected.

Technical Skills

Core: Python, SQL (Window Functions, CTEs, Subqueries, Query Plan Analysis, Indexing), dbt Core, Apache Airflow
Cloud & Infra: AWS (S3, Lambda, Glue, Athena, CloudWatch, IAM), Docker, Git, CI/CD, Medallion Architecture
Data: Dimensional Modeling, Star Schema, Type 2 SCD, ETL/ELT Pipelines, Data Quality, Data Lineage, Parquet, Batch Processing, Incremental Loading
Databases & BI: PostgreSQL, MySQL, Google Looker Studio, Power BI (DAX), Supabase, Streamlit
AI & Other: LLM API Integration, Prompt Engineering, GitHub Copilot, REST APIs, Web Scraping, Agile/Scrum

Professional Experience

MapUp Inc. (TollGuru) – B2B SaaS Startup **Oct 2021 – Jul 2025**
Data Engineer – Europe Region *California, USA (Remote)*

- Architected an automated data quality framework (schema validation, anomaly detection, null checks) that raised data accuracy from 89% to 96% and eliminated 60% of manual review across 500+ sources in 29 European markets.
- Rewrote and optimized 50+ complex SQL queries involving multi-table JOINs, window functions (ROW_NUMBER, RANK, LAG/LEAD), and CTEs; applied EXPLAIN ANALYZE and indexing to cut execution time by 45% across production dashboards.
- Built and deployed 15+ scalable ETL/ELT pipelines using Python, REST APIs, and web scraping (BeautifulSoup, Selenium), automating data ingestion across 500+ government portals and APIs with near real-time availability.
- Engineered a distance-based tolling calculation model improving pricing accuracy by 40% and batch processing performance by 10%, directly supporting acquisition of 3 new enterprise clients.
- Managed AWS cloud infrastructure (Lambda, S3, CloudWatch) achieving 99.2% uptime; led and mentored a 5-person cross-functional team, coordinating with stakeholders across engineering, product, and operations.
- Enhanced S3 data lake performance by restructuring data into partitioned Parquet formats, reducing Athena scan costs by 35% and enabling faster analytical queries.

Projects

Enterprise Revenue Intelligence Platform **PostgreSQL, dbt Core, Python, LLM API, Looker Studio | 2026**

- Business needed revenue visibility across 541K transactions but lacked a unified data model – designed a star schema warehouse (3 fact + 5 dimension tables, Type 2 SCD) with dbt pipelines, full test coverage, and documented lineage.
- Integrated LLM API as a natural-language query interface on Supabase PostgreSQL; delivered revenue leakage detection and 3-method forecasting across 4 live Looker Studio dashboards.

Serverless Weather Data Platform **Python, AWS Lambda, S3, Glue, Athena, CloudWatch | 2026**

- Needed a cost-effective pipeline for continuous weather ingestion – deployed a Bronze-Silver-Gold medallion architecture on AWS serverless with real-time schema drift monitoring. Result: 99%+ reliability at under $2/month.

Education

B.Tech in Computer Science Engineering **2016 – 2020**
KIIT College of Engineering *Gurgaon, Haryana*

Certifications

Google Data Analytics Professional Certificate | Coursera, 2024
Prompt Engineering for Developers | DeepLearning.AI, 2024
